

Amduus Information Works, Inc. develops enterprise level software for commercial, non-profit, and government agencies and organizations. Industries include manufacturing, service, health care, judicial systems, law enforcement, e-commerce, and real estate. The company develops software per specification as well runs it's own Software as a Service (SaaS) applications.

Originally formed in California's Silicon Valley in 2001, the company moved it's presence to Flint, MI in 2003.

## The Deliverables

- **Executable Binaries**

The hardware (computer) requires instructions in a specific machine readable format in order to function.

- **Source Code**

Source code provides the human readable recipe for the software. Combined with a compiler, the application can be modified by anyone skilled in the technology used.

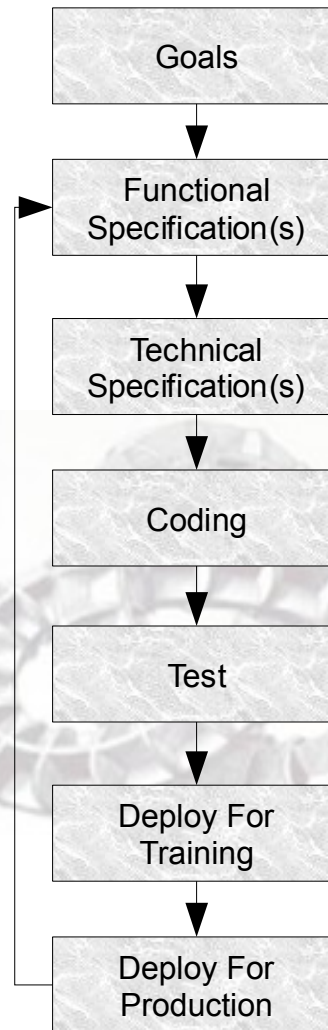

- **Development Documentation**

Source code is written for a compiler to understand. Having the functional and technical specifications can aid in understanding what the software does.

- **User Documentation**

User Guides aid users of the software. Installation and Administration Guides aid with system administration.

## The Process

Start with the must-have's and then start iterating changes into the software. (One should have an idea of the “road map” for changes though.)

## The Reasons

**Differentiate your organization from your competition.**

Have you read about a new management technique? Like your process and have no interest in conforming to other software limitations? Had a suggestion from a customer that sounds great?

### **Have A Software Idea?**

Have you ever thought “There outta be a program that...?” Don't be shy – if you have an application idea (especially one that can be delivered over the web) – be sure to contact us.

### **Example Technologies**

**Database:** Progress, DB2, MySQL, PostgreSQL

**Operating Systems:** Linux, HP-UX, AIX, Solaris, Apple OS X, MS Windows

**Languages:** C, C++, Objective-C, Progress ABL, PHP, Bash/Ksh, Javascript, HTML, XML
